VIRTUAL TEACHING ASSISTANTS

Integration

LMS

Knowledge Base

CampusMind's VTA brings always-on academic support directly into your LMS—whether it's Canvas, Blackboard, or Moodle.

Trained exclusively on your institution's course materials, it assists students 24/7 by answering questions, sharing readings, and automating reminders while giving instructors actionable insights into student progress.

With adaptive quizzing, video transcript analysis, and FERPA-compliant data handling, the VTA enhances learning engagement without compromising integrity or privacy

VIRTUAL TEACHING ASSISTANT

AI Support for Instructors and Students

LMS Integration

Seamless integration with Canvas, Blackboard, and more.

Adaptive Quizzing

Adjusts difficulty to track real learning progress.

Customization

Tailor tone, voice, and feedback style to fit your institution.

Trained on Your Material

Exclusively trained on LMS files, syllabus, announcements, modules, YouTube videos, .mp3 files, and PDF files.

Study Mode

Explains concepts, asks follow-up questions, and reinforces learning.

24/7 Availability

Round-the-clock support for students & faculty, anytime.

Analytics and Insights

Identify learning gaps and improve course delivery.

Video Transcript Analysis

Analyzes YouTube and .mp4 transcripts in LMS for accurate student responses.

FULLY CUSTOMIZABLE

Every instructor teaches differently — that’s why CampusMind’s Virtual Teaching Assistant is fully customizable to your teaching style. From tone and language to the depth of guidance it provides, you decide exactly how it interacts with your students.

- Helps students with:
 - Clarifying course concepts
 - Creating study plans
 - Generating practice questions
 - Answering administrative queries
- Does **not** answer assignment or exam questions
- Instructor visibility into all AI-student interactions
- Guardrails defined by the LMS team
- Security compliant with HECVAT and VPAT standards

Provide Guidance for AI Agent

Configure how the agent will behave, and fine tune its instructions and scenarios.

Tone & Voice *

- Supportive and friendly**
Use this when you want the assistant to feel like an encouraging companion, especially for students who need motivation and positivity.
- Friendly and Approachable**
Choose this for general use where students may need emotional comfort but still expect clarity and direction.
- Professional and Clear**
Ideal for courses where academic tone matters—like graduate-level or technical content—where formality is expected.

Instructional Style *

- Socratic Teacher**
Use this when you want to help students build critical thinking skills and reach answers through reasoning.
- Guided Practice**
Best when students need help progressing through structured exercises, like in math, programming, or problem sets.
- Visual & Real World Examples**
Perfect for visual learners or when simplifying complex topics using diagrams, comparisons, or structured layouts.
- Study Mode**
I'll be your approachable teacher: guiding you step by step, asking questions, and helping you discover answers instead of giving them. We'll keep it interactive, clear, and at your level so you can explain concepts back with confidence.

Feedback Style *

- Offer Hints**
Use when you want the assistant to gently guide students in the right direction without giving full answers.

Choose how the VTA should talk to the students.

Select the level of guidance you want the VTA to provide.

Control how the VTA gives feedback.

SECURITY & COMPLIANCE

CampusMind is built with security and compliance as top priorities.

- VPAT & WCAG 2.1 AA**
Fully accessible and usable for all students.
- No Third-Party Data Processing**
Full control over your data.
- FERPA Compliant**
Protects student data confidentiality and privacy.
- Emergency Response Integration**
Alerts university authorities in case of self-harm concerns
- HECVAT**
Meets higher-ed security and compliance standards.
- Data Privacy**
Student data is never used for AI training.

Responsible AI

Provide guidance on how the AI should or should not respond in given situations.

Academic Integrity *
How does the agent provide feedback on the agents.

No External Resources

Do not suggest external websites, videos, or tools unless the student specifically asks for additional resources. Focus on helping them work within their assigned course materials.

Don't Write Full Essays

Do not write complete essays, reports, or lengthy written assignments even when directly asked. Instead, help students understand essay structure, provide feedback on their drafts, or guide them through the writing process.

Don't Perform Calculations

Do not perform mathematical calculations or provide worked solutions. Instead, guide students through the problem-solving process, explain which formulas or methods to use, and help them understand the steps they need to take.

Off-Limit Topics *
Topics that the agents are trained to avoid.

Topics to avoid *

Add topic... Add

AI Prompts
Configure the AI prompts for your virtual teaching assistant.

Custom Prompt ?

Always provide corresponding links and detailed answers

Internal Prompt (Read Only) ?

#Prompt
Is a playful and supportive assistant to students trying to do well in the course.

You are currently STUDYING, and you've asked me to follow these

Custom prompts based on role playing, group work etc.

Set guardrails to keep the conversation safe

Want to be extra specific? Set the rules on how VTA should behave.
